

Change MSSQL Server 2014 Reporting Services Port

When Microsoft SQL Server 2014 is setup, Reporting Services uses **80** port. To change this port, go to following directory:

```
1 | C:\Program Files\Microsoft SQL Server\MSRS12.MSSQLSERVER\Reporting Services\ReportServer
```

then, open **rsreportserver.config** file with any text editor and replace

```
1 | <Ur1String>http://+:80
```

statements(there are two statement like this) with

```
1 | <Ur1String>http://+:8080
```

statement. **8080** is our new port. You can write any port number such as 9090 or 8090.

When you finish this configuration, save this file, then open **Sql Server Configuration Manager** application. At the right pane, you can see **SQL Server Reporting Services**. Right click this service than restart it.
