

How To Convert WPF To XBAP

There's **no auto conversion** process for turning a WPF Windows Application into a WPF Browser Application(XBAP); You'll need to create a **new WPF Browser Application** project, and add copies of the files by hand by **using** the **"add existing file"** features in Solution Explorer.

However, the more important work you will need to do is to **carefully** review all of the code in your app to ensure it **doesn't make calls** or use controls that are not allowed from within the **security** context of an **XBAP**.

See <http://msdn.microsoft.com/en-us/library/aa970060.aspx> (<http://msdn.microsoft.com/en-us/library/aa970060.aspx>) for an intro to XBAPs and be sure to review <http://msdn.microsoft.com/en-us/library/aa970906.aspx> (<http://msdn.microsoft.com/en-us/library/aa970906.aspx>) for their security constraints. If you need further advice/comment on the topic of XBAP security/capabilities, the WPF platform forum is a good place to ask.
