

## Maven Shade Plugin Filter Kullanımı

Maven shade plugin'nin `<filters>` elementi ile bir dependency'i veya bu dependency içerisinde bulunan bir dosyayı exclude edebiliriz. Bunun için `<filters>` elementi içerisinde bulunan `<artifact>` elementinin değerini, exclude etmek istediğimiz dependency'nin **groupId'sine veya groupId ve artifactId değerlerini birlikte kullanarak** set etmemiz gereklidir.

Örnek:

```
1 <dependencies>
2   <dependency>
3     <groupId>mysql</groupId>
4     <artifactId>mysql-connector-mxj-gpl-db-files</artifactId>
5     <version>5.0.12</version>
6   </dependency>
7 </dependencies>
8 <plugins>
9   <plugin>
10    <groupId>org.apache.maven.plugins</groupId>
11    <artifactId>maven-shade-plugin</artifactId>
12    <version>1.4</version>
13    <executions>
14      <execution>
15        <phase>package</phase>
16        <goals>
17          <goal>shade</goal>
18        </goals>
19        <configuration>
20          <transformers>
21
22 <transformer implementation="org.apache.maven.plugins.shade.resource.ManifestResourceTransformer">
23   <!-- Main class -->
24
25 <mainClass>olyanren.java.database.mysql.embeded.ConnectorMXJObjectTestExample</mainClass>
26   <manifestEntries>
27     <Class-Path>.</Class-Path>
28   </manifestEntries>
29 </transformer>
30 </transformers>
31
32   <filters>
33     <filter>
34       <artifact>mysql:mysql-connector-mxj-gpl-db-files:*</artifact>
35       <excludes>
36         <exclude>platform-map.properties</exclude>
37       </excludes>
38     </filter>
39   </filters>
40   <configuration>
41     <execution>
42       <filters>
43         <filter>
44           <artifact>mysql:mysql-connector-mxj-gpl-db-files:*</artifact>
45           <excludes>
46             <exclude>platform-map.properties</exclude>
47           </excludes>
48         </filter>
49       </filters>
50     </execution>
51   </configuration>
52 </executions>
53 </execution>
54 </executions>
55 </plugin>
56 </plugins>
```

Örnekte yer alan `<artifact>mysql:mysql-connector-mxj-gpl-db-files:*</artifact>` değerinde bulunan mysql: ifadesi, dependency'nin **groupId'sini** temsil eder. Eğer `<artifact>mysql:*</artifact>` demiş olsaydık, mysql **groupId'sine** sahip olan tüm dependency'ler içerisindeki platform-map.properties dosyaları exclude olurdu.
