Spring Security Intercept Url Priority And Filter

```
1    <intercept-url pattern="/admin/home/addUser" access="hasRole('ROLE_ADMIN')"/>
2    <intercept-url pattern="/admin/home/**" access="hasAnyAuthority('ROLE_ADMIN','ROLE_NORMAL')"/>
```

admin/home/addUser paths can only be accessed by **ROLE_ADMIN** and any other web pages located in /admin/ is accessed **ROLE_ADMIN** and **ROLE_NORMAL.** But notice that **addUser** page is also in /admin/ directory. By writing **addUser** url before more general path, /admin/home/**, we made a kind of filter.
